DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities:
 - For the purpose of the clarity, - - does not generate - - should be replaced with - - is not generated - - wherever appropriate.
 - On lines 2 and 4 on page 2, Mo should be defined as Managed Object.
 - On line 14 on page 5, “(S1-2)” should be “(S1-6)”.
 - On line 8 on page 10, “301” should be “201”.
 - On line 24 on page 13, “base” should be “control”.
 - On line 20 on page 14, “302” should be “301”.

Claim Objections

2. Claim 16 is objected to because of the following informality:

Re claim 16, it is objected to under 37 CFR 1.75(c), as being of duplicate of claim 15.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Re claim 1, improper and indefinite claim languages such as “i.e.”, and “etc” are used on lines 8 and 9.

Re claim 1, the limitation “sub blocks” on line 9 fail to particularly point out what it is and how they are formed out of BSM, control station and BS. It is unclear to the Examiner whether “sub blocks” is referred to the sub-system of BSM, control station and BS or sub-characteristics of BSM, control station and BS or sub-collection of BSM, control station and BS.

Re claim 1, it is unclear which “TMN method” on line 11 is used to managing IMT-2000 system and which version of ITU-T standard on line 13 is used to transfer CMISE service executive instructions.

Re claim 2, improper and indefinite claim languages such as “i.e.”, and “etc” are used on lines 18, 19, 25, and 26 on page 26 and lines 3, 4, 6, and 7 on page 27.

Re claim 3, improper and indefinite claim languages such as “i.e.”, and “etc” are used on lines 24 and 25 on page 27.

Allowable Subject Matter

5. Claims 4-15 are allowed.

The following is an examiner’s statement of reasons for allowance:

6. Claims 4-15 are allowable over the prior art of record since the cited references taken individually or in combination fails to particularly disclose determining, in the TMN repeater within the BSM, whether or not the CMISE service executive instruction pertains thereto upon receiving the CMISE service executive instruction from the TMN network management center and transferring the CMISE service executive instruction to a local TMN repeater within a pertinent control station, as specified in an independent claim 4. It is noted that the closest prior art of record, Takimoto (U.S. 6041350) discloses managing the states of a plurality of network resources based on managed objects via network element management system, but fails to disclose determining whether or not the CMISE service executive instruction pertains thereto upon receiving the CMISE service executive instruction from the TMN network management center and transferring the CMISE service executive instruction to a local TMN repeater within a pertinent control station.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- US Patent (6128302) to Kim et al. discloses internetworking method of TMN manager and agent systems for providing the end-to-end PVC connection
 - US 2002/0029298 to Wilson discloses a system comprising a managing system and a number of managed systems, each comprising a number of managed objects
